

Year 10.1H Knowledge Sheet

Pythagoras' Theorem	$a^2 + b^2 = c^2$
Finding the distance between two points	Pythagoras' Theorem $\sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$
The midpoint of two coordinates	$\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$
Gradient	$m = \frac{y_2 - y_1}{x_2 - x_1}$
Equation of a straight line	$y = mx + c$
Compound interest	initial x multiplier _{time}
Trigonometric functions	SOH CAH TOA $\sin x = \frac{\text{opp}}{\text{hyp}}$ $\cos x = \frac{\text{adj}}{\text{hyp}}$ $\tan x = \frac{\text{opp}}{\text{adj}}$
Bearing	A direction given in degrees (3 figures), clockwise round from north.
Standard form	$a \times 10^b$ where $1 \leq a < 10$
Speed	$\text{Speed} = \frac{\text{Distance}}{\text{Time}}$
Circumference of a circle	$C = \pi d$
Area of a circle	$A = \pi r^2$

Sum of the interior angles of a polygon	$(n - 2) \times 180$ n is the number of sides
Exterior angles of a polygon	Add up to 360°
Each interior and each exterior angle of a polygon	Add up to 180°
	Alternate angles are equal
	Corresponding angles are equal
	Co-interior angles add to 180°
Multiplication law for indices	$a^b \times a^c = a^{b+c}$
Division law for indices	$a^b \div a^c = a^{b-c}$
Power to a power rule for indices	$(a^b)^c = a^{bc}$
Zero law for indices	$a^0 = 1$
Negative power law for indices	$\left(\frac{a}{b}\right)^{-c} = \left(\frac{b}{a}\right)^c$

Volume of a prism	Area of the cross-section x length
Volume of a cylinder	$\pi r^2 h$
Volume of a pyramid	$\frac{1}{3} \times \text{area of the base} \times \text{height}$
Volume of a cone	$\frac{1}{3} \pi r^2 h$
Surface area of a prism	The sum of the areas of each face
Surface area of a cylinder	$2\pi r^2 + 2\pi r h$
Surface area of a pyramid	$A + \frac{1}{2} pl$ <p>A = area of the base P = perimeter of the base l = slant height</p>
Surface area of a cone	$\pi r l + \pi r^2$ <p>r = radius l = slant height</p>
Density	$\frac{\text{mass}}{\text{volume}}$
Area of a sector	$\frac{\theta}{360} \times \pi r^2$
Arc length	$\frac{\theta}{360} \times 2\pi r$
Converting a fraction to a recurring decimal	Write the fraction as a division and use short division to solve.

<p>Converting recurring decimals to fractions</p>	<p>Form an equation with $x =$ the decimal number and subtract a multiple of x to cancel out numbers after the decimal point. Rearrange for a fraction.</p>
<p>Set</p>	<p>A specific group of items or numbers, called elements.</p> $A = \{ \dots \}$
<p>Universal set</p>	<p>ξ or the list of possible elements, shown on a Venn diagram as the box around the circle.</p>
<p>Intersection of A and B</p>	<p>$(A \cap B)$</p>  <p>A Venn diagram with two overlapping circles labeled A and B. The area where the two circles overlap is shaded in red, representing the intersection of A and B.</p>
<p>Union of A or B</p>	<p>$(A \cup B)$</p>  <p>A Venn diagram with two overlapping circles labeled A and B. Both circles and their overlapping area are shaded in red, representing the union of A and B.</p>
<p>Complement of A</p>	<p>(A')</p>  <p>A Venn diagram with two overlapping circles labeled A and B. The entire area within the rectangular box is shaded in red, except for the interior of circle A, which is white. This represents the complement of set A.</p>
